Contingency plan to be unveiled soon

Chin: It will tide Selangor folks over until Langat 2 water plant is ready

PUTRAJAYA: The Federal Government will unveil the contingency plan to deal with the possible water shortage in Selangor soon.

Dr Tengku Razaleigh Tengku Mohd Tali bin Tengku Razali, who is a member of the cabinet committee on Selangor's water problems, said that the contingency plan will be completed soon.

He said the plan would be announced by the minister of water, lands and coasts, Tengku Tali bin Tengku Razali, who is also a member of the cabinet committee.

Chin said the minister of water, lands and coasts, Tengku Tali bin Tengku Razali, will announce the details of the plan to the public.

The contingency plan, which includes an emergency plan to deal with water shortages, will be presented to the cabinet committee on Selangor's water problems.

The committee will then submit the plan to the cabinet for approval.

Chin said the contingency plan will be a significant step in addressing the water shortage in Selangor.

There is no water shortage in Selangor, says panel

SHAH ALAM: Treated water reserves in the state were at 11% as of March 30, 2022, said Drainage, Environment and Water Minister Tengku Tali bin Tengku Razali.

He repeated the information from the state's water management committee.

The committee was formed in 2018.

Tengku Tali bin Tengku Razali said the reserve is 11% of the total water intake from Sungai Langat and Sungai Klang.

He added that the reserve is lower than the 25% level required by the government.

The state government has implemented several measures to increase the reserve, including the construction of new treatment plants.

The production capacity of the 34 treatment plants at present is 4,807 million litres a day (MLD), compared to Syabas' distributive capacity of 4,371 MLD.

Khalid said the mitigation project has been completed and the production capacity would rise to 5,195 MLD, which is 788 MLD more than Syabas' distributive capacity.

He said the findings by the special committee, which was set up by the state government to take over the water operations of Syabas, indicate that the water concessionaire had failed to provide satisfactory service to the people.

Khalid added that the Federal Government had also not totally rejected the state's plan on Syabas, but had merely referred it to the Attorney General for advice.

Khalid said the contingency plan will be completed soon and will be announced by the minister of water, lands and coasts, Tengku Tali bin Tengku Razali, who is also a member of the cabinet committee.

He said the plan will be presented to the cabinet committee on Selangor's water problems.

The committee will then submit the plan to the cabinet for approval.

Khalid said the contingency plan will be a significant step in addressing the water shortage in Selangor.
