Outcry over foul stench

Residents suspect it is caused by industrial or chemical dumping into sewage system

Residents of Taman Bukit Kinrara and its vicinity in Puchong want the local authorities to put an end to the foul, acidic stench emanating from the sewage system in their neighbourhood.

The problem has been traced to a sewage treatment plant in Jalan TPK 2/8, Taman Perindustrian Kinrara, Puchong.

“There is a very strong, acidic stench coming from the drainage system which we suspect is coming from one of the industrial operators in the area,” said Taman Perindustrian Kinrara Chinese Chamber of Commerce treasurer and Bandar Kinrara 4 Residents Association chairman Edwin Tang.

“The problem is quite serious as the stench flows with the treated water that is channelled via the main sewers, which flows from the illegal chemical discharges that is too high and frequent,” he said.

Shahrul said IWK had carried out a joint inspection with MPs in November last year and February this year in an attempt to trace the perpetrator, but so far they have been unsuccessful.

“We have also sent notices to the industrial premises blaming them to not dump chemicals into the sewage system,” he said.

“We have also sent notices to the industrial premises blaming them to not dump chemicals into the sewage system,” he said.

Meanwhile, we urge the industrial operators to stop dumping chemicals into the sewage system as it will disrupt the process of treatment,” he said.

A Taman Bukit Kinrara resident, who only wanted to be identified as Mrs. Lai, said the stench was so bad that the residents had to leave their doors and windows closed, and warned that they would not take any good notice if the problem is not solved.

“The problem is that the residents need to keep the doors and windows closed during strong winds as the stench is particularly unbearable at times,” she said.

Meanwhile, we urge the industrial operators to stop dumping chemical waste into the sewage system as it will disrupt the process of treatment,” he said.
